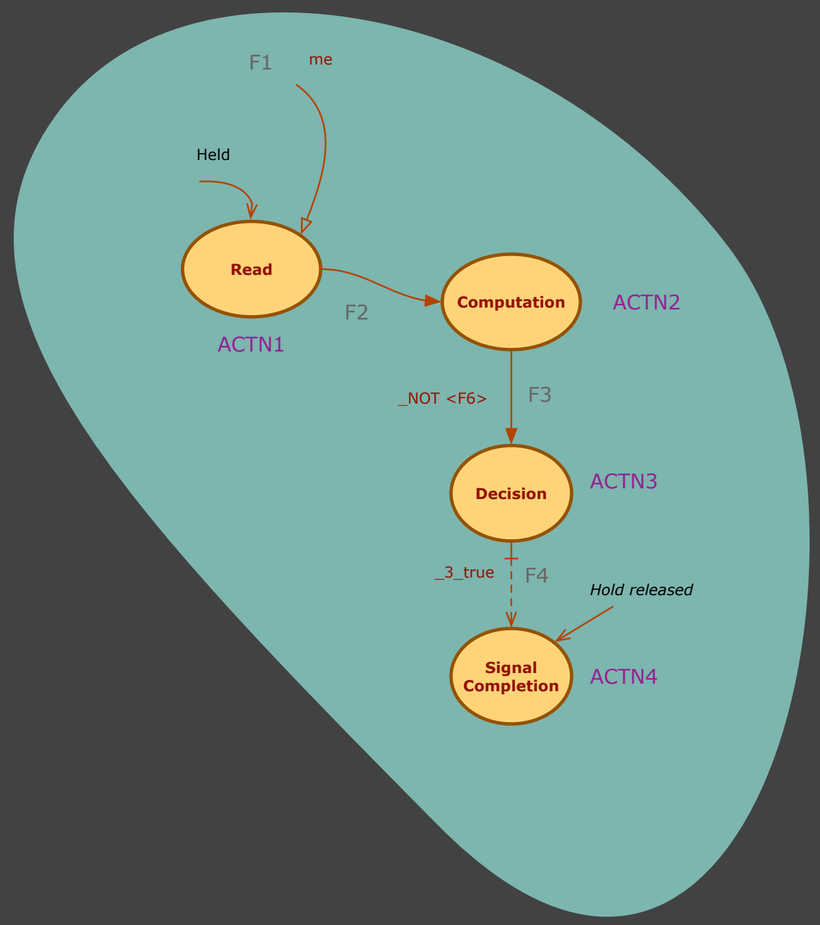
A11

HOLDING OPEN

!Held ? Hold released -> me

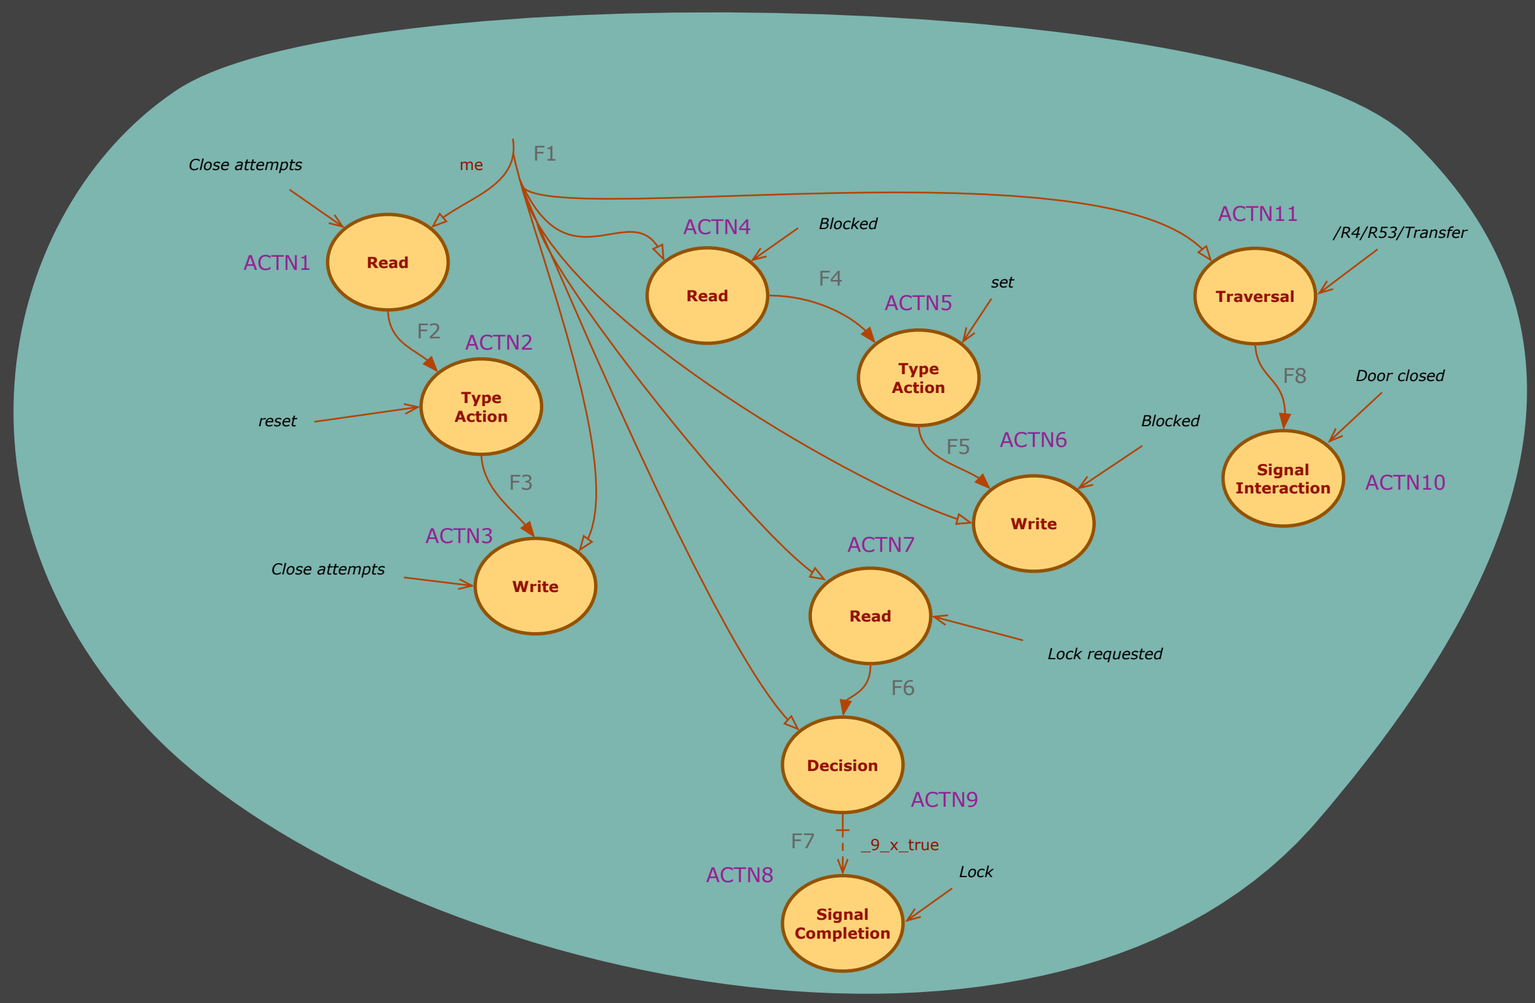


Copyright © 2025, Leon Starr at Model Integration, LLC

A13

CLOSED

Close attempts.reset
Blocked.unset
Lock requested? Lock -> me
// May be None
Door closed -> /R4/R53/Transfer



Copyright © 2025, Leon Starr at Model Integration, LLC

CLOSED

Close attempts.reset
Blocked = FALSE
Lock requested? Lock -> me
// May be None
Door closed -> /R4/R53/Transfer

Here we set Blocked to FALSE directly instead of using the boolean set type operation, which is preferred. So we save this alternate, less preferable data flow for reference. Either approach is fine, but I like to avoid explicit constants even though TRUE/FALSE are fairly safe as constants go.

Count block

```
Close attempts.increment
(Close attempts > /R4/R2/Bank.Max close attempts) ? Cannot close door -> me : {
   Blocked.set
   Keep trying -> me
}
```
