CLOSED
Close attempts.reset Blocked.unset Lock requested? Lock -> me // May be None Door closed -> /R4/R53/Transfer

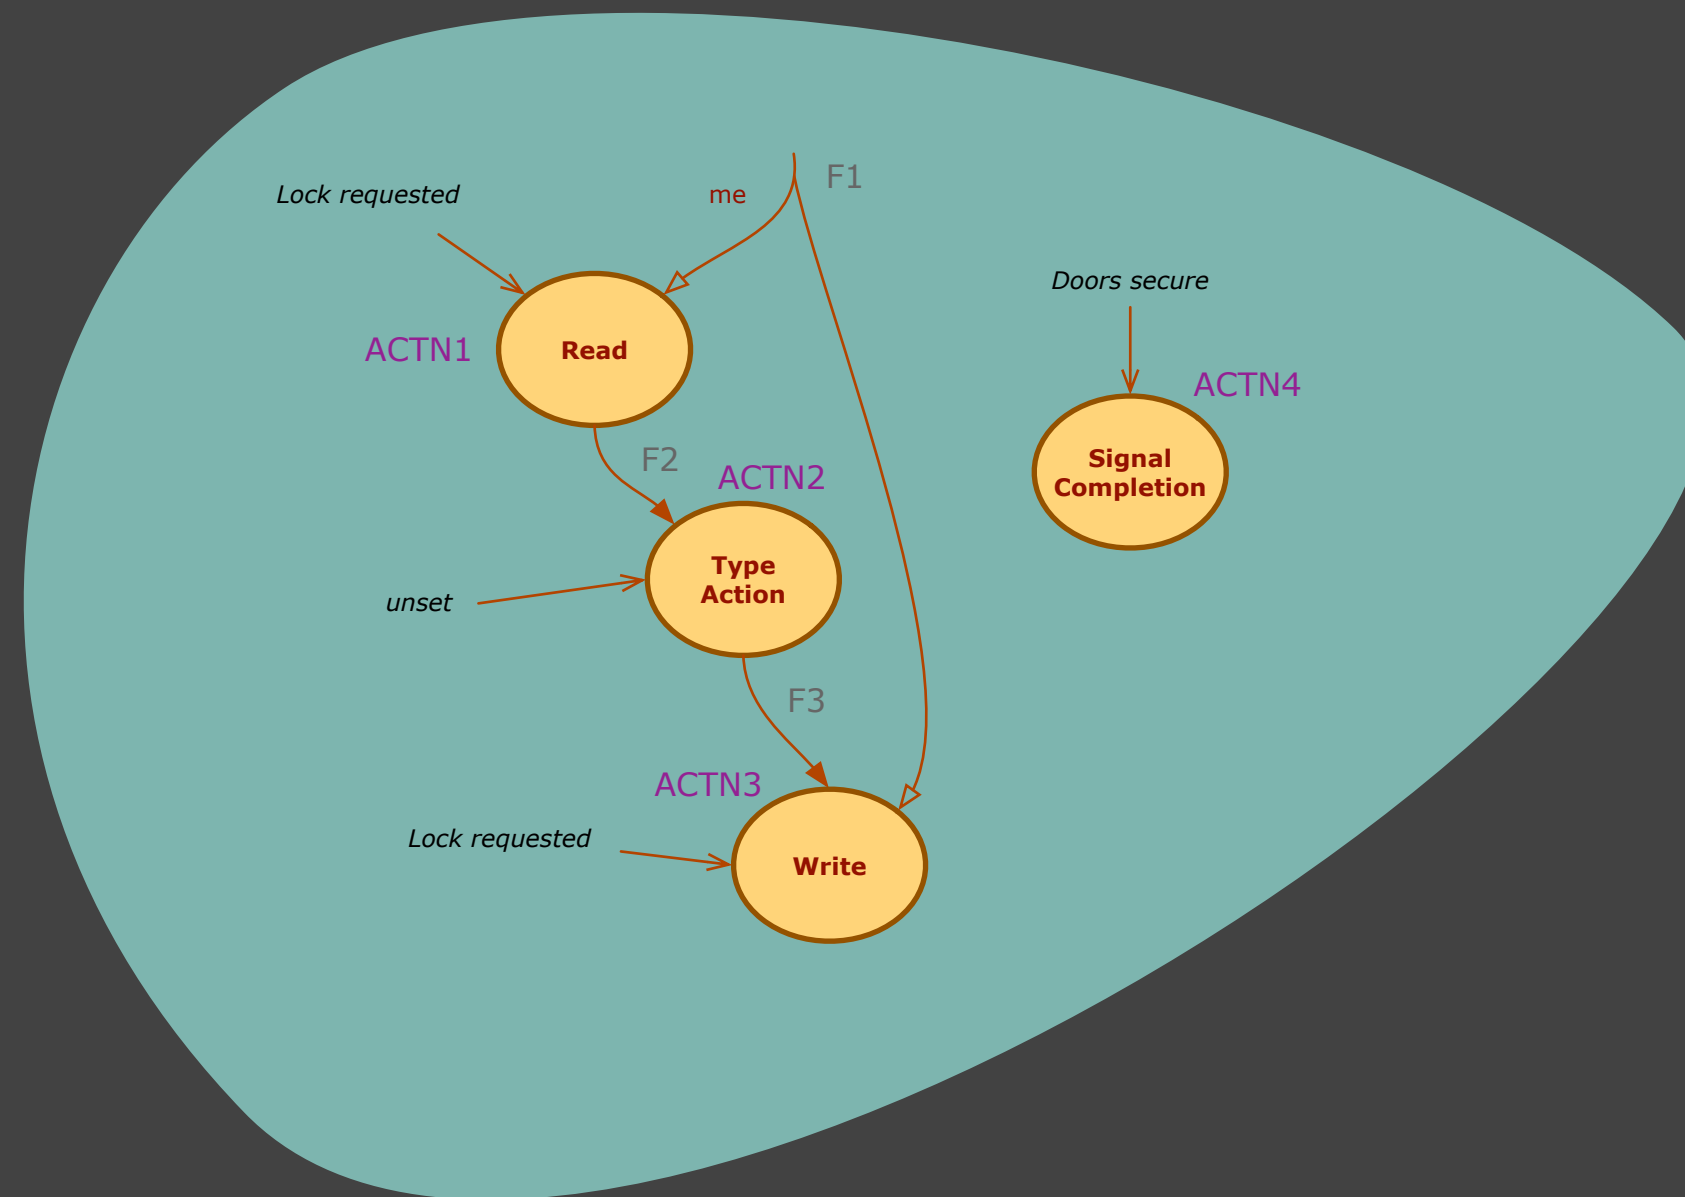

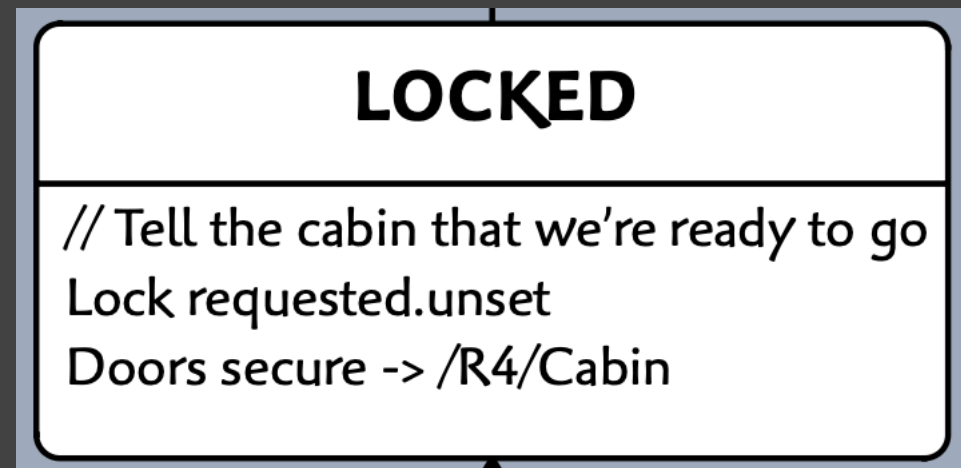

A13

Here we set Blocked to FALSE directly instead of using the boolean set type operation, which is preferred. So we save this alternate, less preferable data flow for reference. Either approach is fine, but I like to avoid explicit constants even though TRUE/FALSE are fairly safe as constants go.

# A15

## Count block

Close attempts.increment

```
(Close attempts > /R4/R2/Bank.Max close attempts) ? Cannot close door -> me : {
    Blocked.set
    Keep trying -> me
}
```
