

Call parse analysis

Leon Starr

Here we study the Scrall parser tree and named tuples resulting from a parse of a variety of operation chains following an attribute write action so that we can figure out how to populate the actions in the xUML populate tool

This pattern could be an attribute.type op OR
iset.attribute OR iset.method() OR iset.service()

Not the () indicating that no parameters are specified.
The parse pattern changes to a different form if one
or more parameters are specified.
